ACKNOWLEDGEMENTS

The Federal Reserve Banks of New York, Atlanta, Cleveland and Philadelphia would like to thank the civic and community partners in our Districts that assist in distributing the Small Business Credit Survey (SBCS). For a complete list of partners, please see the Appendix. We also wish to thank the National Opinion Research Center (NORC) at the University of Chicago for its review of the SBCS survey questionnaire and its assistance in the weighting methodology that is used to make the SBCS statistically representative. Further information about the survey methodology is available in the Appendix.

EXECUTIVE SUMMARY

Small businesses are important to the U.S. economy and the well-being of local communities. They employ half of the nation's private sector workers and in recent decades have created two-thirds of net new jobs. Yet, unlike large firms, which rebounded relatively quickly from the Great Recession, the pace of recovery for small firms has been slower and more uneven.¹

An important part of measuring small business vitality is tracking firms' demand for and ability to access capital. In the aggregate, there is mounting evidence of improvements in business lending, but small dollar lending only recently began to show signs of modest growth after years of decline.² This slow recovery is particularly concerning since microloans (\$100 thousand and under) account for 90 percent of small business loans.³

Since 2010, the Federal Reserve has been monitoring small business credit conditions through regional surveys of business owners. In 2014, the Federal Reserve Banks of New York, Atlanta, Cleveland, and Philadelphia collaborated on a common small business credit survey to cover much of the eastern region of the U.S. The survey offers insight about the quality and pace of the sector's recovery by providing evidence on credit conditions from the perspective of borrowers. It is noteworthy in capturing state, industry, and segment level information about firms' motivations for seeking credit, where they apply for credit, and their success rates.

The survey also highlights the often under-discussed diversity of small businesses, especially across revenue categories. As illustrated in the key findings and in the detailed report analysis, credit needs, demand, sources, and success vary considerably within the small business sector. Overall, the survey results are intended to provide more precise intelligence to key decision makers, including national and local policymakers, service providers, and lending institutions.

Key findings from the survey include:

There are large differences in credit demand between small and larger revenue firms

- While 22 percent of firms overall reported applying for credit in the first half of 2014, results show considerably weaker demand among firms with less than \$1 million in annual revenues.
- Only 18 percent of microbusinesses (under \$250 thousand in annual revenues) applied for credit. By contrast, over 30 percent of small (\$250 thousand–\$1 million) and mid-size firms (\$1–\$10 million) and 58 percent of commercial firms (>\$10 million) applied for credit.

The applicant pool is strong; applicants tend to have prior borrowing experience and are growing.

- Applicants are more likely to be larger firms (in terms of employees), firms with revenue growth in 2013, profitable firms, and previous debt holders.
- Despite experience, the credit search and application process is time consuming. Firms report spending an average of 24 hours applying for credit.
- The most sought after product was a line of credit, followed by loans and credit cards.

There is strong demand for small loans. Firms are borrowing for expansion.

- More than half of applicants sought \$100 thousand or less in credit.
- Nearly 40 percent of those seeking credit said the primary purpose was to expand their business—expansion was a top reason for borrowing across all revenue segments.
- A third of firms report that financing costs have increased over the last 12 months.

Successful applicants have prior borrowing experience and tend to be profitable and larger. It's a tough market for the smallest firms and startups.

- Successful borrowers are more likely to be older, larger (in employees and revenues), and profitable.
- A majority of small firms (under \$1 million in annual revenues) and startups (under 5 years in business) were unable to secure any credit.

Large banks are a dominant credit source, but the use of online lenders is relatively common across firm segments.

- Small businesses primarily turn to large national and regional banks for financing.
- Almost 20 percent of applicants sought credit from an online lender in the first half of 2014.
- Approval rates were highest at large and small regional banks and online lenders. Of firms that applied to a small regional or community bank, 60 percent were approved for at least some of the financing sought.

ABOUT THE SURVEY

The Small Business Credit Survey (SBCS) is a survey of firms, reporting information about business performance, financing needs and choices, and borrowing experiences. Responses to the SBCS provide insight into the dynamics behind aggregate lending trends and shed light on noteworthy segments of the small business credit market (as reported by firms). The SBCS captures the perspectives of businesses with fewer than 500 employees and results are weighted to reflect the full population of small businesses in the 10 states of coverage: Alabama, Connecticut, Florida, Georgia, Louisiana, New Jersey, New York, Ohio, Pennsylvania, and Tennessee.

* For loans, lines of credit, debt consolidation loans or refinancing, and commercial mortgages only.

** Too few observations to calculate Startups' approval rate.

UNSUCCESSFUL APPLICANTS

REASON FOR DENIAL (% of applicants not receiving full amount)

N=335

What were the likely reasons your business did not receive the full amount of financing it applied for in the first half of 2014?

1. Low credit score	45%
2. Insufficient collateral	30%
3. Weak business performance	23%
4. Weak/missing financial documents	14%
5. No relationship with lender	14%

IMPACT OF DENIAL (% of applicants not receiving full amount)

N=326

What was the most important business impact, if any, of not receiving the full amount of financing for which your business applied?

1. Delayed business expansion	47%
2. Used personal sources of funding	20%
3. Prevented ability to fulfill existing orders	12%
4. Did not hire new employees	6%
5. No impact	3%

ACTIONS TAKEN TO IMPROVE CREDIT WORTHINESS

N=335

(% of applicants not receiving full amount)

What, if anything, did your business do to improve its ability to obtain financing in the first half of 2014?

1. Contacted new/more financial institutions	57%
2. Paid down debt	41%
3. Explored online financing sources	33%
4. Consulted business advisor	32%
5. Did not take any actions	7%

PLANS TO APPLY IN NEXT 12 MONTHS

N=1876

Does your business plan to apply for financing in the next 12 months?

METHODOLOGY

OVERVIEW

The Small Business Credit Survey (SBCS) is an establishment convenience survey conducted by the Federal Reserve Banks of New York, Atlanta, Cleveland, and Philadelphia. The SBCS captures the perspectives of businesses with fewer than 500 employees in Alabama, Connecticut, Florida, Georgia, Louisiana, New Jersey, New York, Ohio, Pennsylvania, and Tennessee. The SBCS reports information about business performance, financing needs and choices, and borrowing experiences.

In total, we fielded 2,014 responses to the survey between September 9, 2014 and November 7, 2014. The number of responses to each individual question varied depending on relevance. We weighted results to reflect the full population of small businesses in the 10 states of coverage along the dimensions of industry, age, employee size, and geography.

SAMPLE DESIGN

The SBCS questionnaire is an online survey distributed by more than 80 partner organizations. Partners contact businesses on their membership lists, asking them to participate in the survey provided through a URL address. The SBCS is not a random sample; therefore results should not be interpreted as a statistical representation of small businesses in the coverage area or the nation. Rather, the results should be viewed as suggestive and analyzed with awareness of potential methodological biases.

WEIGHTING

To reduce coverage bias, we use data from the US Census Bureau⁴ to weight responses along the dimensions of industry, age, employee size, and geography. Survey weights are derived to allow estimates to be generated from the sample so as to represent the true small business population. For example, by reweighting our data, we correct for the overrepresentation of older firms. See the next page for sampling distributions of the 2014 SBCS after weighting.

4 – Age data from US Census Business Dynamics Statistics, 2012. All other data from US Census Bureau Survey of Business Owners, 2007.
